

Turn your USB modem's cellular connection into WiFi to share.

Create a WiFi hotspot anywhere you have broadband signal. Secure, powerful, and configurable, the MBR95's most impressive feature is its ability to use 3G/4G USB modems to create instant networks anywhere there is a mobile broadband data signal. The MBR95 also has connection options for traditional wired networking solutions like Cable, DSL, or Satellite.

Connect this router to a 3G/4G USB modem and get more from your data plan. When you connect the modem to the MBR95, you can securely share your data plan with up to 32 devices OR, connect this router to your existing DSL/cable/satellite modem and add up to 600 feet of WiFi to your network.

Key Features

- Converts your USB modem's cellular connection to WiFi
- 2.4GHz WiFi with up to 600-feet of WiFi range (ideal conditions)
- 4 Ethernet 10/100 LAN Ports
- WiFi (802.11 b/g/n) Supports Up To 32 Connections (ideal conditions, low bandwidth usage)
- Configure Up To Two SSIDs, with individual security settings
